

Hol Spray Systems puts technology at the forefront, providing growers with high efficiency machines that place product where it needs to be. The low-noise radial two-speed fan is positioned to ensure that it continually draws in clean air. The unique distribution system distributes the air output equally to the left and right. The overcapacity of the fan makes it possible to operate with a slower PTO speed, enabling you to "gear up and throttle down", reducing fuel consumption and noise. Excellent coverage can be obtained with varying water rates giving you custom control and flexibility based on the spray being used.

Sprayers are available in 1000, 1500, and 2000 Litre tanks with an over the row option coming soon.

## Standard Features

- Brass piston membrane pump, with a capacity of 120 litres/minute
- 100 litre clean water tank 10 litre hand washing tank
- Two adjustable venturi injectors for a high mixing capacity
- Easy-to-clean suction filter and self-cleaning pressure filter - -
- Electrically operated valves and pressure regulator
- 2 x 8 air outlets with twin anti-drip nozzle holders and nozzles of choice
- Double wide-angle power take-off
- Low-noise, two-speed disengageable radial fan with a 0 position.
- Nozzles and air outlets can be adjusted in height and angle -
- Possibility to rotate the air outlets to the front and back Fully galvanized frame
- Axle that can be adjusted in width and position and an adjustable tow bar
- Height of 3 meters
- Road lights and slow moving vehicle sign

## Unique Options

Extra set of valves, enabling you to shut off the top nozzles separately - perfect for young trees.

Second spray line enabling you to switch rapidly between hollow cone nozzles and venturi air induction nozzles.

Electric air adjustment of cowlings improves liquid deposition and reduces drift.

Available in two versions:

- left/right together
- left/right separately

A unique solution for spraying into the heart of the tree, helping provide better control of hard to kill pests such as Woolly Apple Aphid.

The hydraulic axle can be adjusted up to 30 cm. This helps with not only stability but with offsetting the issue of compaction across a larger area.

Spray operation via touch-screen and built-in recording monitor:

- Constant check of the spray pattern - a clogged nozzle is visible within one minute
- Exact forward speed
- Simple final check by requesting the sprayed litres and treated hectares.
- Digital tank measurement - prevents overfilling tank, and promotes better time management when re-filling tank
- Digital pressure measurement
- Automated wind monitoring/compensation system available
