

CKP 300

orchard hedger

- 1) Optimize fruiting wall for more effective adoption of efficient practices (platform, darwin, bin carriers, sprayer etc.)
- 2) Increase fruit bud formation / initiaion
- 3) Decrease shading to lower part of tree
- 4) Decrease time spent on manual pruning

"The Original"
sud-tyrol
hedger.
Built with
over 20
years of
research and
design
experience.

- Travel speeds of 2-4 kph
- Cuts maximum 30mm
- Various timings can be used (green or dormant pruning) depending on desired result
- 300cm main bar, 250cm, or 210
- Hydraulic adjusted height and angle

Designed for the optional addition of the patented **"windows pruning" system** - Inventor Dr. Alberto Dorigoni, Istituto Agrario, S. Michele All'Adige

Typical response from a hedging cut made near bloom

~3 months after hedging, a flower bud has been initiated from the stipular bud at the base of a leaf on young wood

Simple joystick control with up to 7 movements

Horizontal skirting bar (55cm)

Horizontal topping bar with 90° rotation and spring loaded for safety around posts

Strong universal flange with 2 modes of connection for secure attachment

Independent PTO Hydraulic system; pump, heat exchanger, 60 L holding tank

Quality. Efficiency. Safety.
